

## Repeat steps 2 through 5 with the second endcap at the other side of the shower

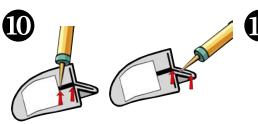

Draw a line with a straight edge that connects the two marks from step 6.

When you reach the arrow mark at the other end, cut off any excess material and firmly press the end to the floor. *Move along the length pressing firmly down on both sides of the WaterStopper.* 

Peel off about 4 inches of the adhesive backing and stick the corner at the two intersecting marks.

(OPTIONAL) Apply silicone sealant on 1/2 inch of each of the ends of the adhered WaterStopper.

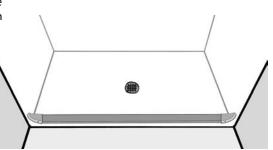

(OPTIONAL) Apply silicone sealant inside the endcaps at the shoulder, the bottom and the underside slot.

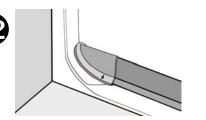

Using the line as your guide, continue to peel the liner as you gently stretch the material and stick the WaterStopper along the line.

Peel the liner off the self-adhesive tape on the endcaps.

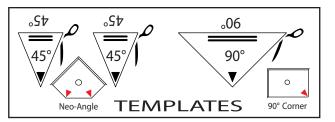

Stick the endcaps inside the the drawn outline. Make sure the upright rubber is slotted properly in the endcap.

Wipe off any excess silicone sealant and pencil marks with the other alcohol wipe

The WaterStopper used with a heavy duty, weighted shower curtain offers the best water retention system available.

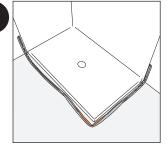

**CORNER INSTALLATION** SUPPLEMENT WATER STOPPER

## Refer to steps 1 through 6 on the WaterStopper Installation Instructions to begin

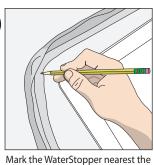

5

INAMILIC

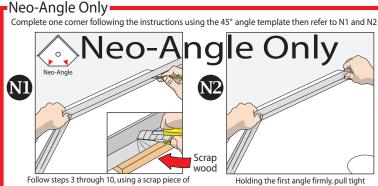

Lay the WaterStopper along the front of your shower leaving equal excess at each end.

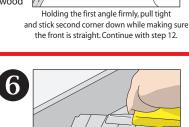

З

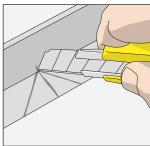

corner with a pencil.

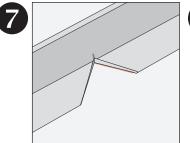

wood or other hard surface between the shower floor and the WaterStopper to make your cut. Remove liner between cuts

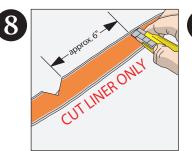

Use your razor knife to cut out the traced area. Make sure to start your cut on the vertical

Extend your pencil mark up and onto

the vertical surface.

This is an example of a cut for a 90° corner shower.

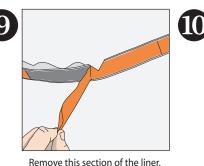

Cut out the template top-left corner

of this page to match the angle of

your shower.

Slice the liner about 6" on either side of the cut-out. NOTE: DO NOT CUT THROUGH THE ADHESIVE STRIP OR THE RUBBER

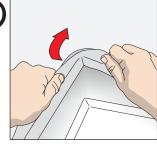

Place the template on the WaterStopper

with the arrow pointing toward your mark

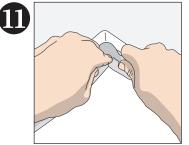

and the parallel lines (=) flat against the

outside edge. Trace the template.

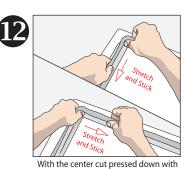

surface. If the WaterStopper does not fully bend to your angle, you may need to cut further into the vertical surface. NOTE: DO NOT MAKE CUTS ON YOUR SHOWER SURFACE

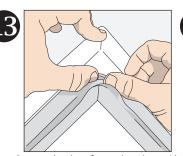

Bend the WaterStopper to your angle. Make sure that the outer edge curls up rather than down.

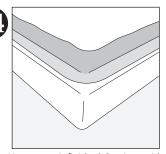

With one finger or thumb in the inside pit of the cut, press the WaterStopper down onto the shower.

one hand, use the other to stretch tight and stick the exposed section of the adhesive down to the corner of your shower.

Run your thumbs or fingers along the outside bend sticking the curled-up section down.

Your corner is finished. Continue with steps 9 through 11 on the reverse side to complete installation.
